Quality Assurance Test Summary Report

AI Resume Builder | Test Cycle 1 | Prepared by Aditi | Tested 7 October 2026 | Automation run 8 October 2026

1. Executive Summary

This report documents the first QA test cycle of the AI Resume Builder web application. Testing covered authentication, registration, resume creation and editing, resume download, public/private sharing, persistence, deletion, backend APIs and MongoDB data validation, using manual UI testing, Postman API testing and database checks.

77 test cases were executed: 69 passed and 8 failed (pass rate 89.61%). The 8 failures map to **7 documented defects**, because two failed cases share one defect (BUG-005) and the AI job-description issue produced one failed UI case and one failed API case (BUG-006) plus a separate timeout observation (BUG-007). All defects are open and reported; none has been fixed or retested.

Separately, **3 Playwright UI tests were executed and passed**. They are not included in the 77 and use mocked API responses (see section 6).

2. Application and Environment

Item	Detail
Application	AI Resume Builder: create, edit, download and share resumes
Frontend	React (Vite), deployed on Vercel: ai-resume-builder-dusky-ten.vercel.app
Backend / Database	Node.js + Express on Render; MongoDB Atlas
Tools	Postman (API), MongoDB (data checks), Playwright 1.56.0 with Chromium (automation)
Application source	github.com/aditichugh29/ai-resume-builder

3. Scope and Approach

Manual / UI (51 cases): login, registration, dashboard, resume creation, personal info, professional summary, experience, education, projects, skills, download, public/private sharing, persistence after refresh and logout/login, and resume deletion, with valid, invalid and blank inputs. **API (21 cases, Postman):** registration, login, token authorization, resume create/read/update/delete, public resume access, AI enhancement endpoints and resume upload. **Database (5 cases):** user record, uploaded resume, user-resume ownership, deleted-resume check and API-to-database consistency. Detailed cases are in the QA Test Sheet.

4. Test Results

Category	Executed	Passed	Failed
Manual / UI / Registration	51	44	7
API (Postman)	21	20	1
Database	5	5	0
Total	**77**	**69**	**8**

Failed cases: TC-009, TC-011, TC-015, TC-024, TC-026, TC-027, TC-032 (manual) and API-019 (API). All database checks passed.

5. Defects

ID	Title	Severity	Priority	Status	Reference
BUG-001	Required email allows progression when blank	Medium	Medium	Open	TC-009
BUG-002	Invalid email format accepted	Medium	Medium	Open	TC-011
BUG-003	Public resume shows default name 'Your Name'	High	High	Open	TC-024
BUG-004	Profile photo upload fails	High	High	Open	TC-026

ID	Title	Severity	Priority	Status	Reference
BUG-005	Updated name does not persist after refresh	High	High	Open	TC-027, TC-032
BUG-006	AI job-description enhancement returns multiple options and explanations instead of one clean result	Medium	Medium	Open	TC-015, API-019
BUG-007	Initial AI job-description API attempts timed out (later attempt responded; root cause not established)	Low	Low	Open	API-019

Defect details

ID	Steps to reproduce	Expected	Actual
BUG-001	1. Log in and open a resume. 2. Go to Personal Info. 3. Leave Email blank. 4. Click Continue.	Required email should block progression.	User could continue with the email blank.
BUG-002	1. Go to Personal Info. 2. Enter aditi123 as email. 3. Click Continue.	Invalid email should be rejected.	aditi123 was accepted.
BUG-003	1. Save a name in Personal Info. 2. Enable public sharing. 3. Open the public link.	Saved name should appear publicly.	Public page showed 'Your Name'. Other fields (email, summary, experience, education, projects, skills) displayed correctly (TC-025).
BUG-004	1. Go to Personal Info. 2. Select a valid profile image. 3. Upload.	Image should upload.	Upload failed with error 'imagekit.upload is not an function'.
BUG-005	1. Change the name in Personal Info. 2. Save. 3. Refresh the page.	Updated name should persist.	Name did not persist; other changes remained.
BUG-006	1. Enter a job description in Experience and use AI enhancement (API: POST /api/ai/enhance-job-desc).	One clean enhanced description.	Multiple alternatives, explanations and placeholders were returned.
BUG-007	1. Send POST /api/ai/enhance-job-desc. 2. Observe the first attempts. 3. Repeat.	A response within a reasonable time.	Initial attempts timed out; a later attempt returned a response. No root cause claimed.

6. Automation (Playwright)

ID	Scenario	Result
AUTO-001	Login with valid credentials opens the dashboard	PASS
AUTO-002	Login with wrong password shows error and stays signed out	PASS
AUTO-003	Creating a resume with a title opens the resume builder	PASS

3 executed, 3 passed (8 October 2026, Playwright 1.56.0, Chromium). The tests run the application's real React frontend, started locally from its source code, with **backend API responses mocked** to mirror the real server. They therefore verify UI behaviour only and do not validate the live API, Render deployment or MongoDB. A test was also changed temporarily to confirm it fails when the application behaves incorrectly. Automation is reported separately from the 77 executed cases. The automation code is in the automation folder of this QA repository.

7. Follow-Up, Limitations and Conclusion

Follow-up: this is an initial test cycle. Defects are reported for fixing; no defect is claimed as fixed. After fixes, retest BUG-001 to BUG-007 and run regression on resume editing, public output, persistence after refresh and logout/login.

Limitations: cross-browser and mobile/responsive testing were not performed; authorization between two users (user A accessing user B's resume), wrong-file-type upload and template-selection testing were not executed; no post-fix regression was done; automation covers three flows with mocked API responses.

Conclusion: core flows (authentication, registration, resume editing, download, sharing, deletion, API operations and database persistence) mostly work. The three High-severity defects (public name display, profile photo upload, name persistence) should be fixed first because they affect the resume output users share.
